THE OPPORTUNITY

Global renewable demand is accelerating especially in emerging markets backing large-scale solar. These capital-intensive projects have long been the preserve of institutions.

OUR FOCUS

Utility-scale solar, developed end-to-end and structured for measurable environmental impact.

USE OF PROCEEDS

Capital is deployed into ring-fenced solar SPVs covering land, equipment, EPC construction and grid connection.

IMPACT

Clean-energy generation and carbon offset, underpinned by long-term PPAs and regulated tariffs.

MARKET POTENTIAL

With the global shift towards sustainability, the solar market is projected to grow exponentially, especially in Asia and Africa.

RISK MITIGATION

Projects are diversified across geographies and technologies to minimise exposure to individual market fluctuations.

LONG-TERM VISION

To become a leading provider of renewable energy solutions while driving innovation and sustainability in the energy sector.

ESG-ALIGNED RENEWABLE INFRASTRUCTURE

Powering the Transition to Clean Energy

RA-ESG PLC channels investment into real, income-generating solar infrastructure, combining institutional-grade access with measurable environmental impact.

HOW VALUE IS CREATED

01 Develop
Origination of utility-scale solar from concept through to grid-ready infrastructure.

02 Generate
Long-term, contracted energy income via government and industrial PPAs.

03 Realise
Value realised through institutional sale, refinancing or retained energy income.

FOUR VALUE-CREATION ROUTES

- The Platform
- Project Sales
- EPC Construction Profits
- Long-Term Energy Income

STRATEGIC JV PARTNERS — SANY · JA SOLAR · REDSOLAR · SAHAJ SOLAR
Project funding, world-class EPC delivery and a built-in acquisition route significantly reducing funding, delivery and exit risk.

Real assets · measurable impact · long-term clean-energy income.
